

Always the right indoor humidity

The first dehumidifier series from Bosch

Dry Series is compact, efficient and particularly quiet

November 2024

- ▶ Dry 1000, Dry 2000 and Dry 4000 for different room sizes
- ▶ Automated modes: Auto, Night and Laundry
- ▶ Prevents mold and dries laundry efficiently
- ▶ Flexible use with a compact design and whisper-quiet operation

Wernau. Maintaining the right humidity is crucial for comfort and health in your home. Bosch Home Comfort has expanded its Well-being portfolio with the addition of the Dry 1000, Dry 2000, and Dry 4000. These new dehumidifiers offer a powerful and efficient way to manage humidity levels throughout the living space. By removing excess moisture from the air, the portable dehumidifiers help create a healthier and more comfortable indoor environment. This also prevents the formation of mold and condensation, thus reducing the risk of colds and infections. At the same time, the powerful laundry drying mode ensures fast and gentle drying of laundry.

Powerful and quiet operation in three sizes

The new dehumidifier series includes three models designed for different room sizes: the Dry 1000 is ideal for rooms up to 17 square meters, the Dry 2000 is perfect for spaces up to 24 square meters, and the Dry 4000 creates a comfortable climate in rooms as large as 33 square meters. The Dry Series dehumidifiers can remove up to 16 liters of moisture per day (Dry 4000) and operate at an exceptionally low noise level of just 34 dB(A) (Dry 1000).

Convenient control and enhanced air quality

Each appliance in the Dry Series comes with an 'Easy Dry Select' feature, allowing to choose from three automated modes – Auto, Night, or Laundry – with just a click. In Auto mode, the power adjusts automatically. Night mode ensures the appliance runs particularly quietly with the lights off. As soon as the desired humidity is reached, the appliance switches into energy-saving mode. Laundry mode is designed for quick and gentle drying of clothes. The intuitive touch display, featuring an LED ring and illuminated function icons, makes selecting modes simple and user-friendly. Additionally, the optional 2-in-1 filter, which combines HEPA and activated carbon layers, offers extra protection against airborne pollutants like mold spores, germs, allergens, dust, and pet hair. It also effectively removes and neutralizes unpleasant odors.

Functional design for flexible use

The compact design, featuring an integrated handle and smooth-rolling castors, makes transporting the dehumidifiers effortless, allowing for flexible use in any location. Thanks to its functional design, the large, semi-transparent water tank (2.5 l) is easy to remove, transport and empty. When the water tank is full, a warning appears, and the appliance switches off automatically. Alternatively, the condensed water can be drained directly into an external container using the supplied hose.

The Dry 1000, Dry 2000 and Dry 4000 dehumidifiers from the Dry Series will be available in Germany from mid-December.
