

The right temperature anytime, anywhere

The new Climate 5000 M from Bosch

March 2023

- ▶ Configuration of over 400 variants possible
- ▶ Wide temperature ranges for cooling and heating
- ▶ Elegant Bosch design and easy operation

Wernau – Cool breeze or warm air – the new Climate 5000 M can do both. It expands Bosch's portfolio of efficient multi-split air conditioners. Thanks to its wide output range from 5.3 to 12.3 kW, the Climate 5000 M is suitable for use in larger flats, single-family homes and small commercial buildings.

Clever combinations, flexible temperature control

Air-conditioning on demand has never been easier, as a choice of four outdoor units and three complementary indoor units provides the right solution for virtually any application. One outdoor unit optionally features two, three, four or five connections for indoor units and covers the temperature control for several rooms. The wide range of indoor units, in turn, comprises wall and ceiling cassettes as well as consoles. This diversity ultimately allows for more than 400 individual configurations. PHC professionals will additionally appreciate the maximum pipe lengths of up to 80 metres, which ensure easy and flexible installation of the Climate 5000 M.

Energy-efficient cooling and heating

The Climate 5000 M is designed to cope with a wide temperature range, cooling efficiently at ambient temperatures of between -15 and +50 degrees Celsius at an energy efficiency rating of A++. Cosy heat is supplied by the air conditioner within a temperature range of between -15 and +24 degrees Celsius at an energy efficiency rating of A+. The Climate 5000 M is programmed for sustainability, as it runs on the refrigerant R32, which has a lower GWP (Global Warming Potential) than comparable refrigerants such as R410A. This considerably reduces the carbon emissions of the Climate 5000 M.

Timeless design in any place

Silver ring, black fans, compact housing – the Climate 5000 M blends in with any environment. Thanks to its space-saving footprint, it can easily be installed on the balcony or terrace, even if space is confined. Controlling the air conditioner is just as easy. Depending on the requirements, it is operated with a wired controller or with an infrared remote controller. A separately available internet gateway additionally allows online access to the device. Once connected to the internet, the Climate 5000 M can be controlled from anywhere using the HomeCom Easy app.

The Climate 5000 M multi-split air conditioner is available as of March 2023.
