

Note

Installation, circuit breaker, main shutoff switch, emergency shutoff switch and protective measures in accordance with local regulations.
Please note! Never use ground wire (green/yellow) for controls purposes.

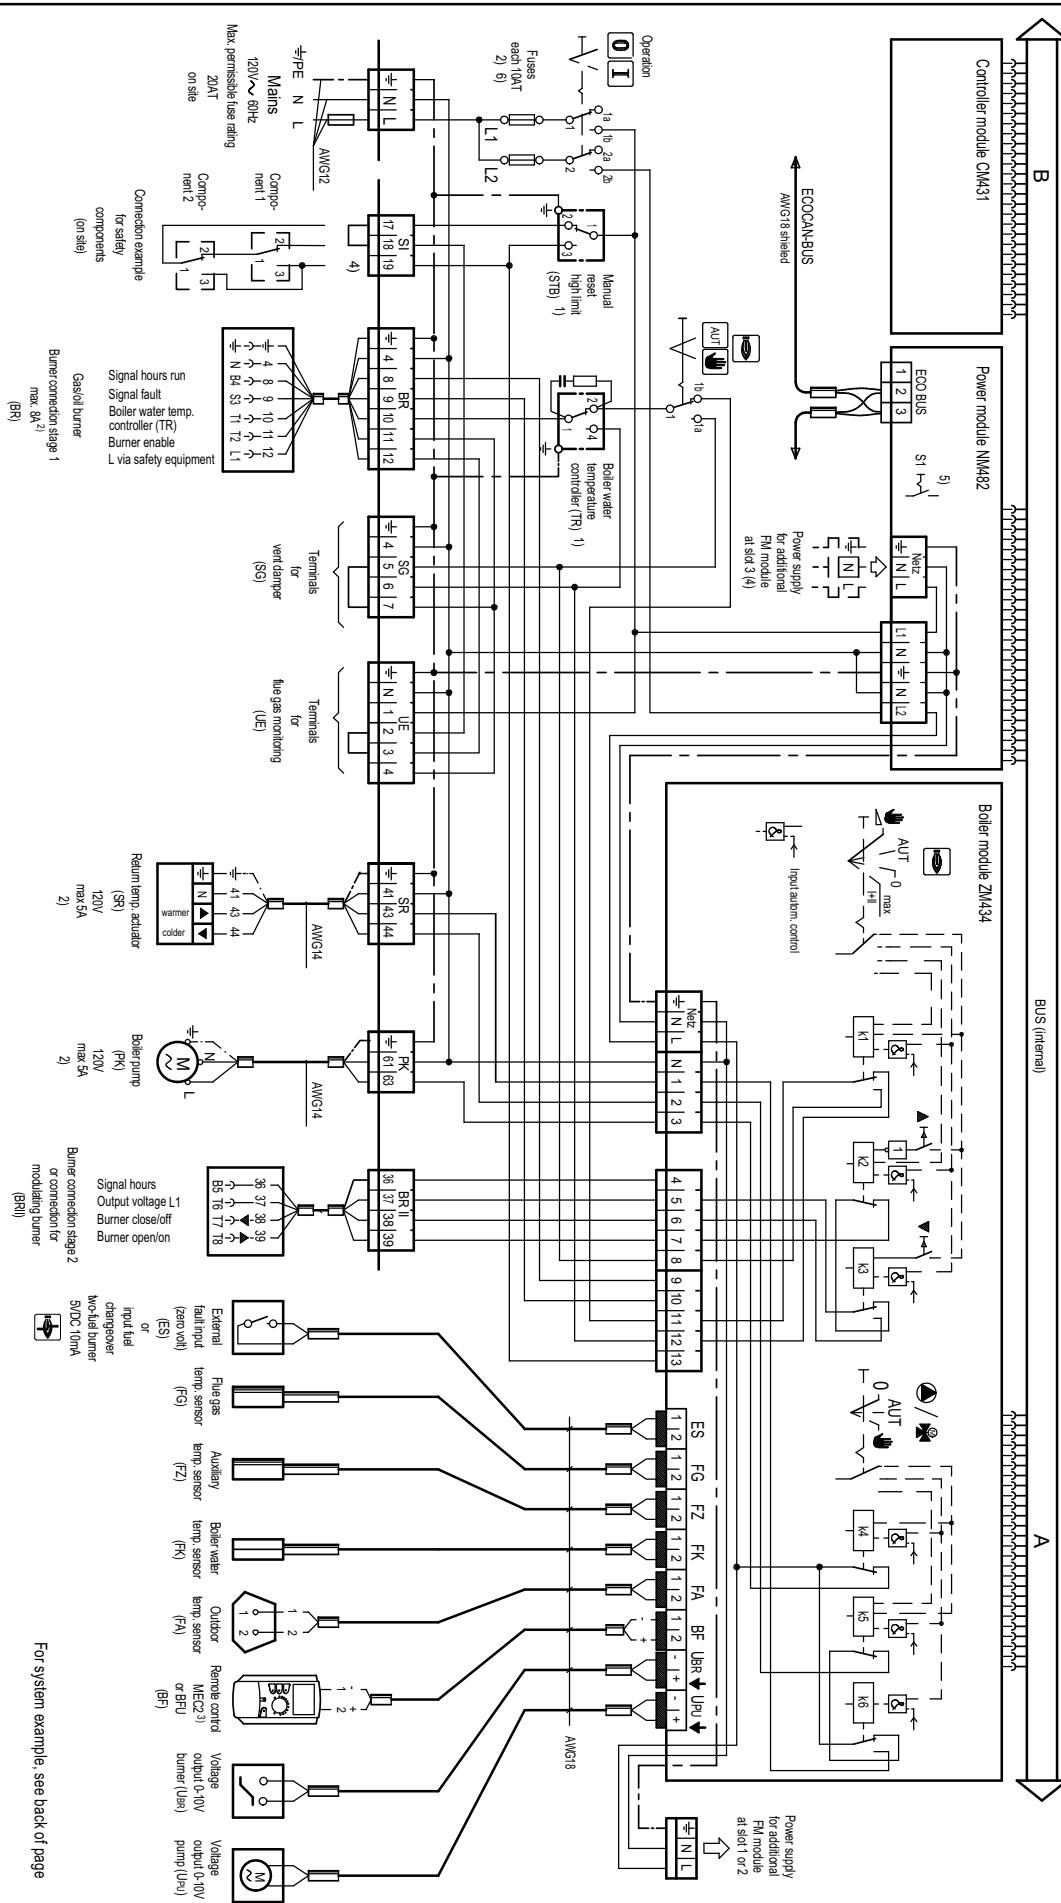

Verify that power is connected to the appropriate terminals.
This control must be hard wired.

- 1) Contact opens when the selected temperature is exceeded.
- 2) The bolt current for each power circuit [L1,L2] must not exceed 10A.
- 3) Please note! One MEC2 can be allocated to each control panel. The MEC2 can be plugged into the control panel or room wall-mounted using the wall installation kit (optional).
- 4) Terminal for optional external safety equipment. Interrupts the burner only!
- 5) When connecting multiple ECOCAN-BUS components, the S11000 switches termination or the NM482 of the two outermost ECOCAN-BUS devices must be closed.
- 6) L2; fuse protection of the modules in slots A, 1, and 2

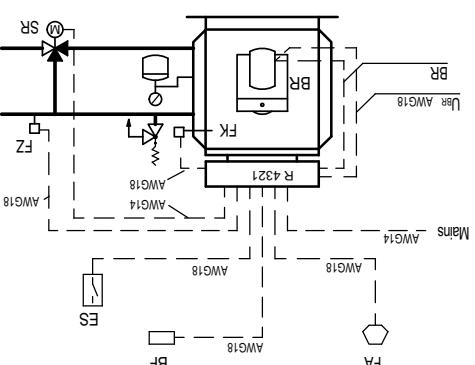

L1; fuse protection of the modules in slots 3 and 4

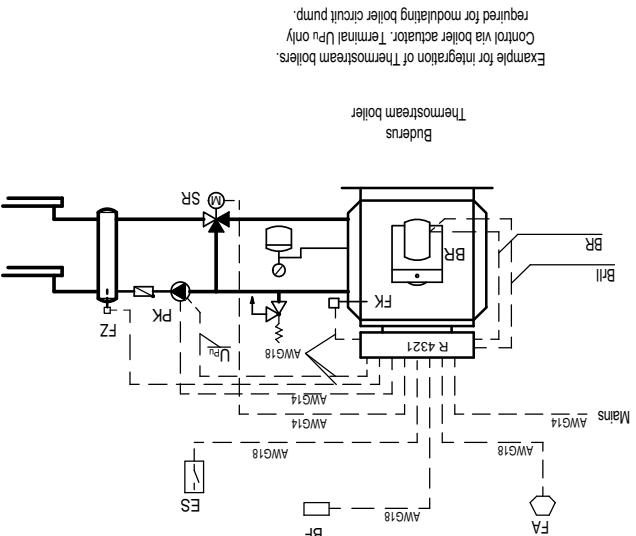

Switching states		
	Stage 1 modulating	Stage 2/ modulating
Switch position	k1 -/-	k2 -/-
Switch position	k4 0	k5 -/-
Button pressed	-/-	-/-
AUT mode	AUT mode	AUT mode
Control mode	Control mode	Control mode
0	-/-	-/-
max	-/-	-/-
Input alarm, control		
▼ = alarm		
▲ = error		
Control voltage 120V ~		
Extra-low voltage for sensors		

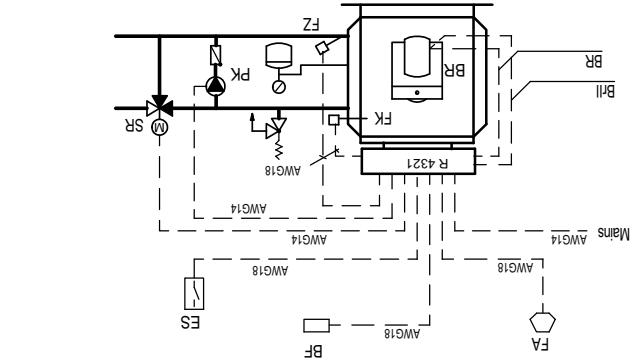

System example 1

System example 2

System example 4

Example for integration of boilers with
return temperature control.

Control via a separate boiler actuator (SR).

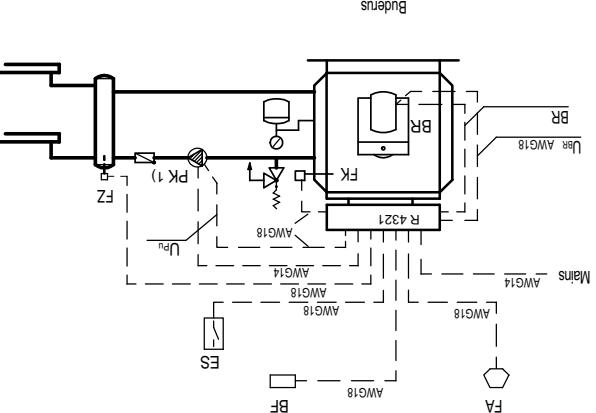

Control via a separate boiler actuator (SR).

Example for integrating boilers with
return temperature control.

Control via a separate boiler actuator (SR).

Example for integrating boilers with
return temperature control.

System example 3

Example of the connection of a Thermosstream boiler
or LT boiler with low- and temperature
control via a separate boiler circuit actuator (SR).

Example of the connection of a Thermosstream boiler
or LT boiler with low- and temperature
control via a separate boiler circuit actuator (SR).

Example of the connection of a Thermosstream boiler
or LT boiler with low- and temperature
control via a separate boiler circuit actuator (SR).

1.) Terminal U_{Pu} only required for modulating boiler circuit pump (0-10V).
LT boiler pump may be controlled when using low loss headers.

1.) Terminal U_{Pu} only required for modulating boiler circuit pump (0-10V).
LT boiler pump may be controlled when using low loss headers.

1.) Terminal U_{Pu} only required for modulating boiler circuit pump (0-10V).
LT boiler pump may be controlled when using low loss headers.

U_{Pu}: voltage output 0-10V pump
SR: return temperature actuator
PK: boiler pump
FZ: auxiliary temperature sensor
FK: outdoor water temperature sensor
ES: external fail input (dry contact)
BR: burner
BF: remote control MEC2 or BFU

U_{Pu}: voltage output 0-10V pump
SR: return temperature actuator
PK: boiler pump
FZ: auxiliary temperature sensor
FK: outdoor water temperature sensor
ES: external fail input (dry contact)
BR: burner
BF: remote control MEC2 or BFU
